The screenshot displays the Microsoft Excel interface. The title bar at the top reads "Book1 - Excel". The ribbon is set to the "Home" tab, which is divided into several groups: Clipboard (containing Cut, Copy, Paste, and Format Painter), Font (containing font face, size, bold, italic, underline, color, and background color), Paragraph (containing bullet points, numbering, indentation, and alignment), Styles (containing text styles, conditional formatting, and format as table), and a "Tell me what you want to do" search bar. The worksheet grid below the ribbon shows columns A through N and rows 1 through 19. A callout box with a pointer to the font size dropdown in the ribbon contains the text: "Choose Arial, font size 9".

G is the column reference

4 is the row reference

Formula bar: `=G4/H4`

Let's say that we want to do the following:

1. Multiply (Volume) \* (Cost per Unit)
2. Copy the ready formula and multiply (Volume) \* (Price per Unit)

We have to fix the column reference of Volume, because we would like to multiply by Volume when we copy to the right

The Text Wizard has determined that your data is Delimited.  
If this is correct, choose Next, or choose the data type that best describes your data.

Original data type

Choose the file type that best describes your data:

☒ Delimited - Characters such as commas or tabs separate each field.

☐ Fixed width - Fields are aligned in columns with spaces between each field.

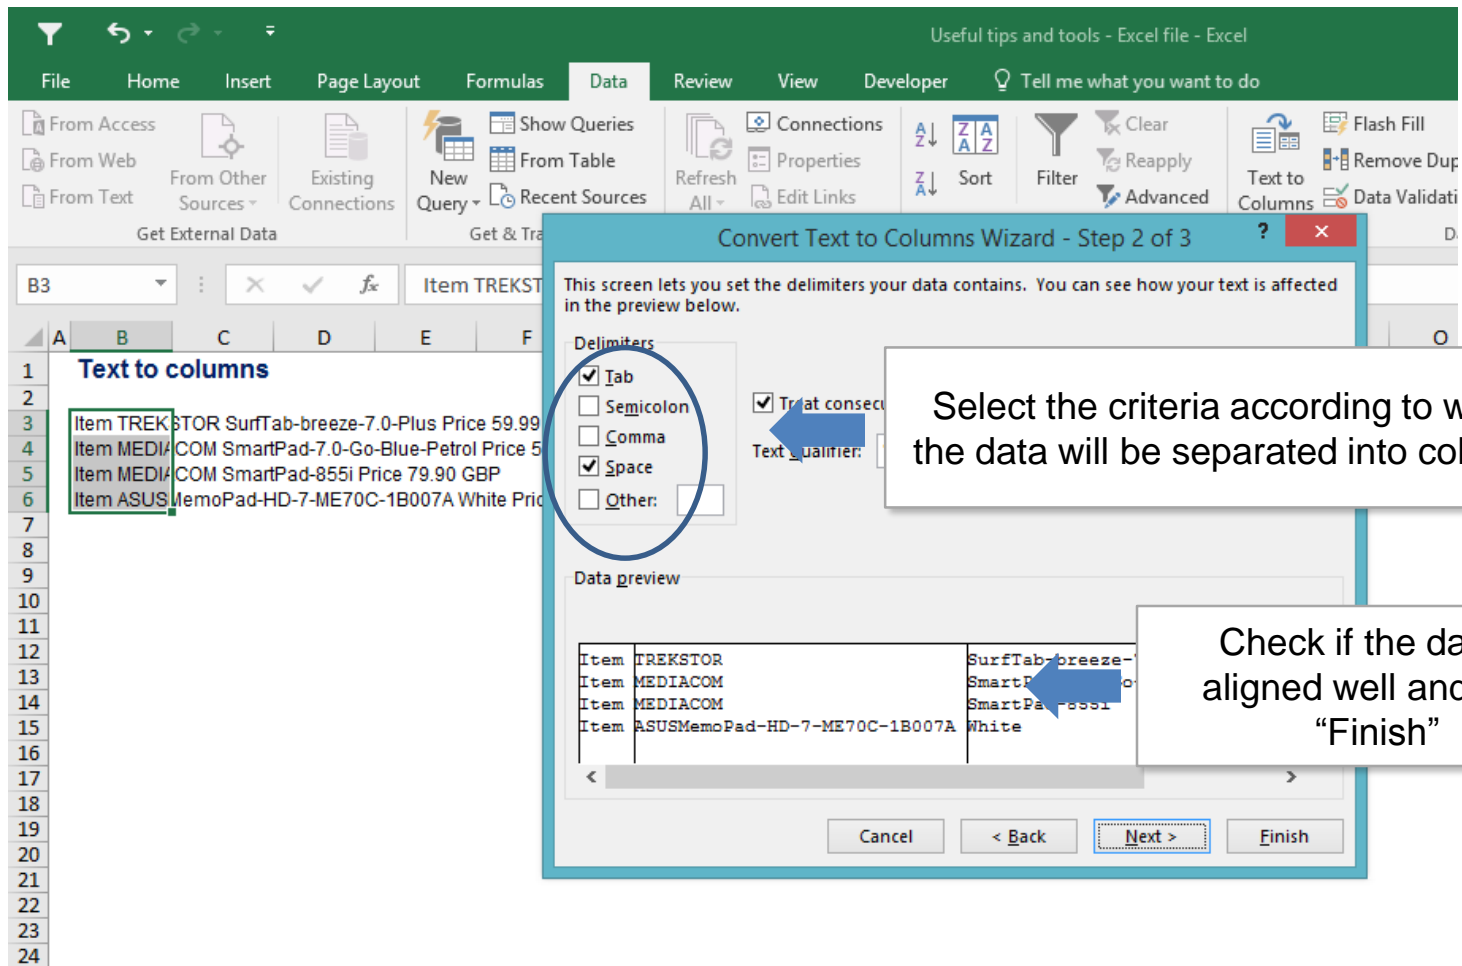

Preview of selected data:

In order to create dynamic names within a model:

- 1 Type equal, as if you are creating a formula
- 2 Put within brackets the hard text. In this case "P&L."
- 3 Use the "&" function in order to link to a given cell (C4 in this example)

Type the number format code, using one of the existing codes as a starting point.

Assign any type of format: date, number, percentage etc.

Here we would like to have a "multiple" format, therefore we have ".0 x"

# Custom formatting of cells

The screenshot displays the Microsoft Excel interface. The ribbon is set to the 'Home' tab, showing options for Clipboard, Font, Alignment, and Number. The active cell is C5, and the formula bar shows the value '5'. The spreadsheet grid shows columns A through K and rows 1 through 15. The text 'Custom formatting' is written in cell C1. In cell C5, the value '5' is displayed with a custom format of '5.0 x', which is highlighted by a green box. A text box with the text 'Here is the output format' is positioned next to the cell C5.
